Profile

Two years of IT and information security operations, moving into infrastructure engineering. Identity lifecycle, disaster recovery testing and incident response in production, plus self-hosted Linux infrastructure I provision, harden and run myself. MSc AI student preparing for LFCS and CKA, drawn to systems that report healthy while quietly producing degraded output.

Work Experience

Data, Automation & AI Intern

April 2026 – May 2026

Talk360, Amsterdam

- Built production monitoring for live telecom traffic: CUSUM, EWMA and rolling z-score detectors over call quality metrics, baselined on 90-day hour-of-day averages and tuned to separate sustained degradation from transient blips
- Shipped fraud and call quality alerting end to end, from detection logic through to Slack notification and triage routing
- Ran scheduled aggregation across Mixpanel, Slack and internal databases on a self-hosted n8n instance, replacing manual reporting

Information Security Intern

June 2025 – August 2025

Swapfiets, Amsterdam

- Mapped SOC 2 controls in Vanta and collected supporting evidence across systems, feeding the SOC 2 and ISO 27001 readiness effort
- Investigated and resolved security incidents, including follow-up remediation, and ran periodic third-party access reviews across SaaS and Slack integrations

IT Intern

June 2024 – June 2025

Swapfiets, Amsterdam

- Owned identity lifecycle in Okta and AccessOwl: joiner, mover and leaver provisioning, group-based access and permission approval workflows
- Initiated and led disaster recovery tests, including restore verification and the remediation cycle on what those tests exposed
- Administered endpoint fleet and device compliance through Meraki MDM, automated recurring provisioning out of the manual queue, and resolved tickets across hardware, software, network and access

Infrastructure & Projects

Personal Linux Infrastructure (Debian/Ubuntu, nginx, systemd, Docker)

- Provisioned and hardened a Debian/Ubuntu VPS: key-only SSH via sshd drop-in, root login disabled, UFW, fail2ban jails, unattended-upgrades; traced a surviving `PasswordAuthentication yes` to cloud-init drop-in ordering and fixed it at that layer
- Run services behind nginx reverse proxies with Let's Encrypt TLS: self-hosted n8n and a Flask webhook receiver with HMAC verification, both under systemd; home lab running local LLM inference

Self-hosted ML Platform (k3s, Terraform, Ansible, Prometheus, Grafana – in progress)

- Model served behind an API, reproducible from a git repository: containerised workloads on k3s, provisioned with Terraform and Ansible, deploys from git
- Prometheus and Grafana instrumentation with drift detection, SLOs and runbooks as requirements rather than additions; environment must rebuild from scratch

IJVM Bytecode Interpreter (C) — full interpreter for the IJVM instruction set: stack machine, instruction decoding and memory management, with extensive validation across edge cases.

Education

MSc Artificial Intelligence, *Vrije Universiteit Amsterdam / Universiteit van Amsterdam*

2025 – Present

BSc Computer Science, *Vrije Universiteit Amsterdam*

2022 – 2025

Skills

Systems	Linux (Debian/Ubuntu), bash, systemd, SSH, nginx, UFW, fail2ban, Let's Encrypt, DNS
Infrastructure	Docker, Kubernetes/k3s, Terraform, Ansible, CloudPanel, Azure (in study), Git
Monitoring	Prometheus, Grafana, statistical process control (CUSUM, EWMA, z-score)
Identity	Okta, AccessOwl, Meraki MDM, Vanta, SOC 2, ISO 27001, access reviews, DR testing
Code	Python, Bash, SQL, JavaScript, C; n8n, REST APIs, GitHub Apps and webhooks

Certifications & Languages

Certifications	LFCS and CKA in preparation, AZ-104 planned; UAV operator; WOPR 2nd Degree Lifeguard
Languages	Polish (native), English (CAE Grade A, C2), German (DSD II, C1), Dutch (basic)
